## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35, drawn to an apparatus and method for fitting a hearing aid, classified in class 381, subclass 314.
- II. Claims 36-38, drawn to a method of using a genetic algorithm crossover operator, classified in class 700, subclass 29.
- III. Claims 39-43, drawn to a method of using a genetic algorithm mutation operator, classified in class 700, subclass 31.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because how the child sets are formed are not relevant to the method of fitting a hearing aid. The subcombination has separate utility such as tuning audio applications involving head-related transfer functions and wind noise, as admitted by Applicant.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

Art Unit: 2644

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
